ALUMINUM PROFILE

20x20mm Anodized Treatment

**COVER**

Covers for aluminum LED profiles differ in the degree of transparency. Thanks to a conscious choice, you can plan the lighting effect, light dispersion and distribution better. Transparent covers absorb a smaller amount of light, followed by frosted, milky and opal ones.

**Transparent**

**Milky**

Material	PC	PC
Light Transmission	93%	72%
Coefficient Diffusion	Low	Medium
Method of Assembly	Push In	Push In

**End Cap**

The end caps aims to aesthetically close the profile and additionally protect the led strips inside. We have two types, with a hole and without a hole.
