

Axana Line

The light system with class - and without borders

SIGLLICHT
Die Münchner Lichtmanufaktur

The Rail System For your ideas

On the ceiling: Puristic

... versatile

.... playful

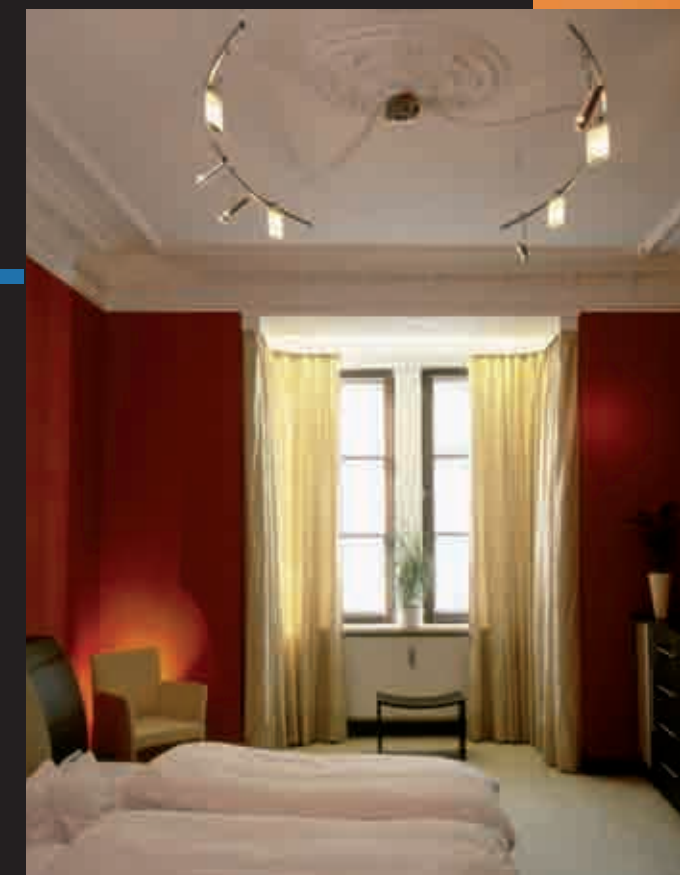

Axana Line

Perfection and freedom of design

With Axana Line, rooms can be illuminated according to their own ideas - timelessly beautiful and flexible in design.

Axana Line is a sophisticated, high-quality system for commercial and private use. The well thought-out construction and the coordinated materials make the rail system very stable in terms of value.

... peppy

Axana Line

The high quality rail system is ideal for light installations on the wall. For example, to illuminate your own art gallery. You benefit from the numerous possibilities to accentuate, conceal or simply illuminate the Axana luminaires with style.

Aesthetic busbar for the wall....

... on request also with gallery hooks.

Axana Line

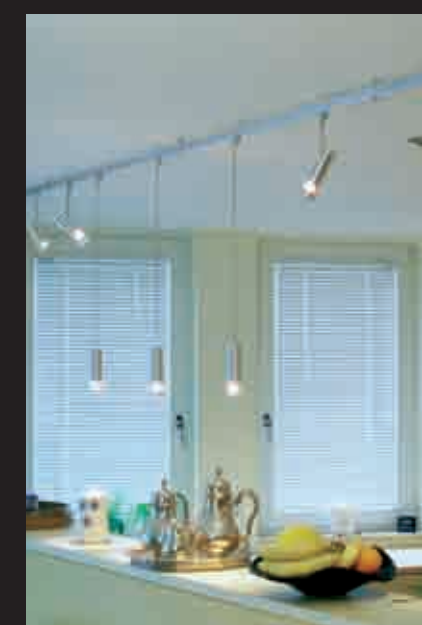

Make your dining table a world of experience and enrich your kitchen with lighting that looks like an exotic flavor. With the Axana Line rail system, you can enjoy the freedom that your creativity deserves.

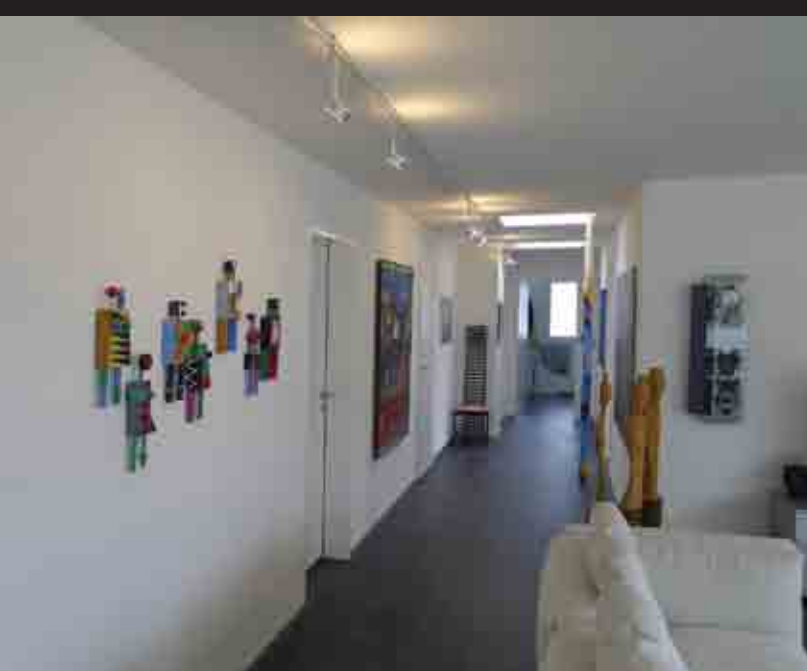

Axana Line:
Rail System for the dining table.....

... for the kitchen

The Rail System for the art...

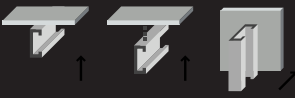

... and the art of presenting it

Axana Line

Being pally with the art: Pictures, sculptures and other personal jewels make your home a world that reflects your personality. With the Axana Line rail system, you breathe life into your favorite objects and turn your living space into a real gallery.

In 7 steps to your system on the ceiling.

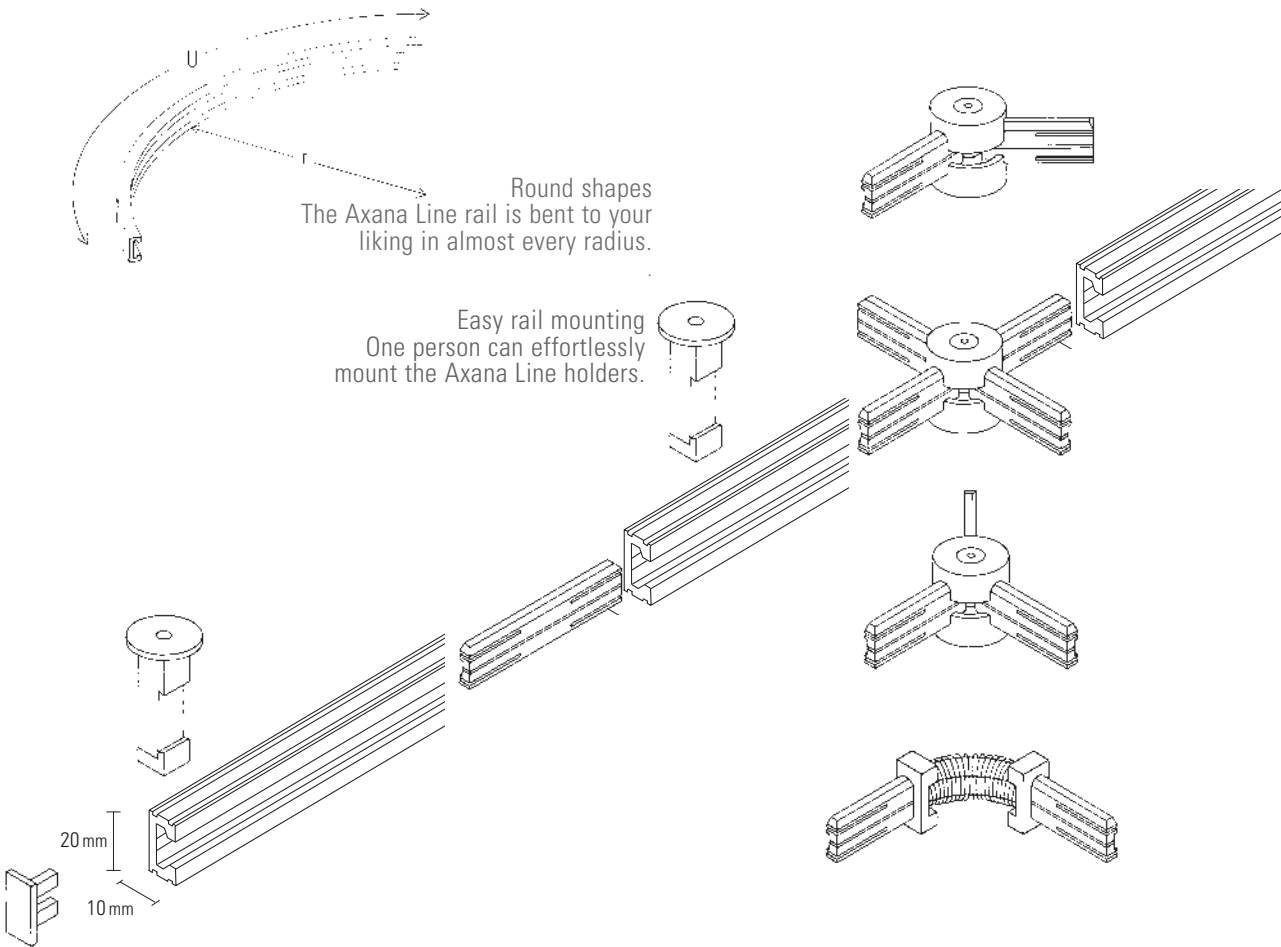

1. Rail mounting choose straight / curved flat or upright..
2. Choose mounting method directly on the ceiling / wall or suspended.
3. Select connection straight or angled.
4. Select transformer see page 14.

and the easy way.

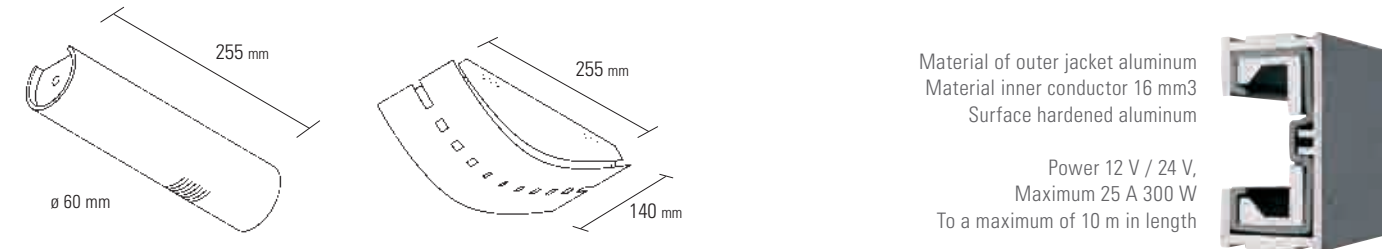

5. Select supply see page 15.
6. Select optional accessories, see below.
7. Select lamps see page 16 - 47.

Upright on the ceiling, suspended, bent; on ceiling slopes, everything is possible.

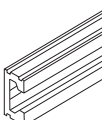

There's no such thing as the philosophy "doesn't work", which is particularly evident in the Axana Line collection. Be seduced by our numerous components to creativity. Should a component be missing to realize your dream line - we will build it for you. Good connections are everything - especially when it comes to high currents. That is why we manufacture and design feeders, connectors and current collectors in such a way that they are durable even in continuous use. The polycarbonate jacket and the construction of the inner conductor allow safe contact and prevent short-circuiting. The lamp change is possible even during operation.

Transformer housing suitable. (Order numbers on page 14)

and the easy way.

Flat on the wall, ceiling or beam, suspended, anything is possible on inclines.

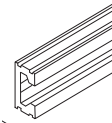

The Axana Line system can't only be mounted in one way; you can mount the system flat or upright. For flat mounting, the system is also ideal as a picture bar. With our available picture hooks, you can put your art perfectly in scene. A special feature of the system is also that you can attach it to the side of wooden beams or to any fall. The luminaires, which are available in two adapter variants, create fantastic lighting options. Be creative.

Transformers

Quality, high performance and economical

More object than transformer

The transformers are the heart of every low-voltage lighting system. SiglLicht therefore designs the transformers so that they integrate harmoniously into the overall concept. The advantages of low-voltage lighting systems are thus not only fully technical but also aesthetically pleasing.

TSZ: flat and powerful

TSZ our thinnest transformer housing, is made of solid aluminum and very carefully processed. Due to its unusual design, it is suitable for mounting on ceilings as well as on walls. The TSZ is also the holder for the Axana Line rail for flat mounting up to one meter in length.

TSZ double pack

TSZ can be arranged nicely together. The performance of the rail system can be expanded in this way - with only one power outlet - up to 210 VA.

TBZ: factually round

TBZ is compact and efficient for all installations on walls and ceilings with flat and vertical mounting of the Axana Line rail. The transformer housing can be piggybacked to the rail, two holders must be ordered separately. Of course, the housing can also be mounted next to the Axana Line.

TAZ: Performance gently packaged

TAZ has a 300 VA toroidal transformer and needs no minimum load. With vertical mounting of the system, the rail runs directly into the transformer housing and is held there by two integrated holders. For flat mounting brackets must be mounted in front of the housing. When used in the middle of a system two end feeds are needed.

Power feed

Good connections are everything

AXANA LINE

Good connections are everything - especially when it comes to high currents. That is why we manufacture and design feeders, connectors and current collectors in such a way that they are durable even in continuous use. Our feeds are exclusively equipped with silicone cables so that no fires can occur even in the event of a fault. The infeeds are available in two different cross-sections and two different lengths so that a solution is available for every possible feed-in type.

Middle power supply

The center feed is always used when the TSZ or a TBZ transformer box is mounted in the middle of the rail.

Final power supply

The end supply is required when the transformer housings are mounted at the end of the system or when the TAZ transformer housing is mounted in the middle of the rail as the rail cannot be routed through the transformer housing. Here you need 2 end feeds; this also applies to the TSZ double pack.

Middle power supply special

The infeed is used when working with external transformers and the feed is supposed to disappear invisibly backwards into a wall, for example. The Axana Line rail must be recessed here on the back.

You can use all our electronic dimming transformers and with halogen, - alternatively, equip LED lights at the same time.

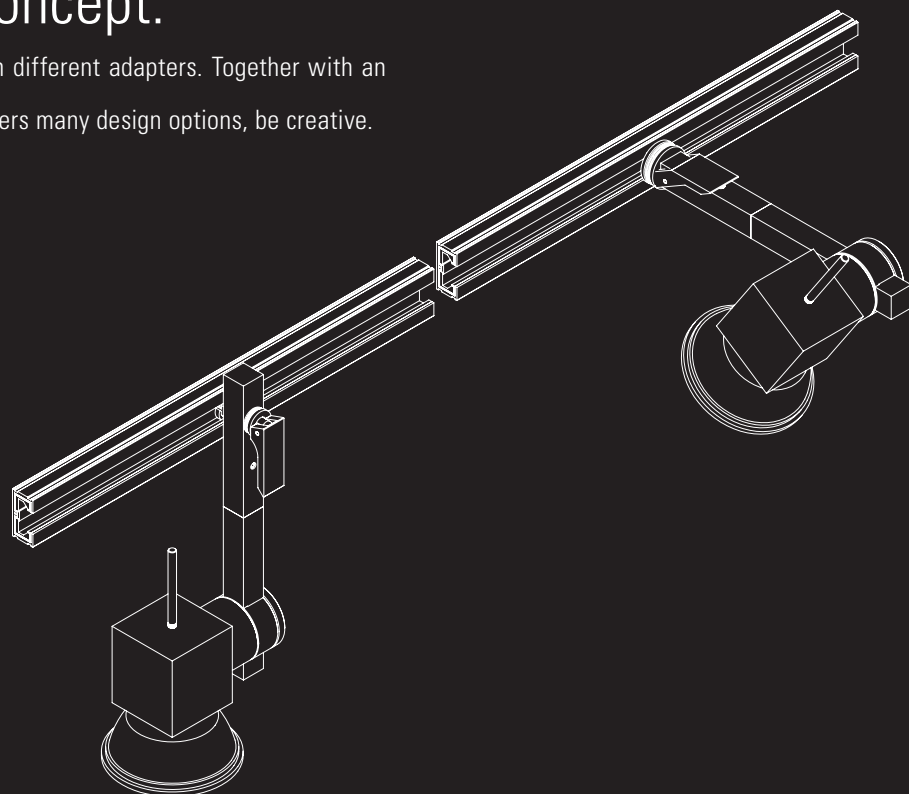

Of course, our LED-equipped luminaires dim with dimming.

The right lamp for every application.

In the luminaire range of the Axana Line system, you will find a wide selection of luminaires. Classic spotlights, floodlights for illuminating large areas, decorative lights that create gentle, all-round light and pendant lights. Thanks to the consistent design concept, you can of course combine all luminaires with each other.

The two-adapter concept:

Each lamp is available in two versions with different adapters. Together with an upright or flat mounted rail, this concept offers many design options, be creative.

Excellent quality and that guaranteed.

All lights are manufactured by us in our Munich factory by hand and subjected to a strict quality process, so you enjoy it for a long time.

Axana Line

The lighting system that makes boundaries disappear and shrouds your world in a magical light. Classic - aesthetically - technically perfect. Designer light from master hand.

ITB panel socket

We gladly manufacture all lights for the same price with the ITB panel socket.

When using the ITB panel socket

You need a hole of exactly 36mm in the ceiling and a free space behind the ceiling of 40mm. The minimum ceiling thickness is 15mm. The rosette of the ITB socket has an outside diameter of 40mm.

The 12V lights require an external transformer

MANUFACTORY

SigLicht stands for the highest quality since 1986

Handcrafted production, individual design and innovative technology are top priorities at SigLicht. Our lights are therefore made with the greatest care and from the best materials for 30 years in our Munich factory. Due to our long experience, we can meet the highest quality standards and, thanks to our personal support respond to the special requests of our customers individually. Many other lighting ideas can also be found at www.siglicht.de.

Discover the fascination of light live

In our modern showroom in Munich, you can let the lights work on you. We are happy to show you all functions personally and advise you individually! Just visit us or arrange your individual consultation on +49 8920119 46 or info@siglicht.de. You can also find SigLicht products throughout Germany at our selected retail partners. Simply at www.siglicht.de find your dealer near you!

In the Körnerstraße 2a in Munich:
Monday to Friday: 9am – 5pm
Thursday: 9am – 8pm
Saturday 10am – 4pm
(From October to the end of April)

Klaus Sigl
Owner and managing Director
SigLicht GmbH

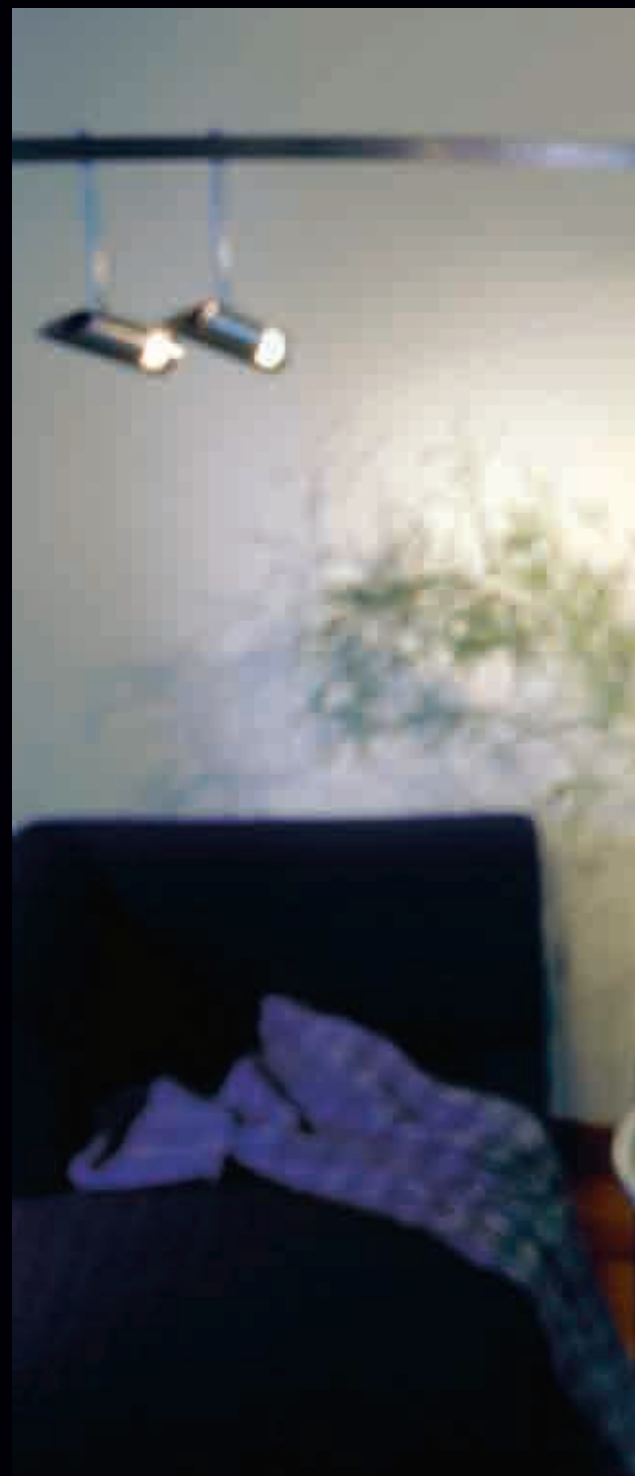

“Light fascinates me since my youth. For me, a good lighting design only makes sense, although the light that gives the light to the person and the room is perfect. I am therefore particularly pleased that the Axana Collection has succeeded in creating a symbiosis between a timeless luminaire body and the perfect light.”

Individually for you

In addition to our existing range of luminaires, we can also offer you special concepts and extensions - according to your individual lighting wishes and ideas. Just contact us!
We are happy to advise you personally.
