MANIFEST

UK

Egbert Keen is a source of knowledge in the field of lighting and light. Together with other creative minds his ambition is to use light to make exceptional and excellent work- and living environments. Original, non-standard designs that rise above the run-of-the-mill. Therefore, he designs, develops and produces enduring professional lighting concepts and – systems. For all those who want something exceptional and enduring.

Based on years of research Egbert Keen has designed a unique range of fixtures that meet all the requirements for a perfect functionality. The result: fixtures for decorative and functional applications, with an almost unlimited lifespan.

NL

Keen Lichtdesign wil een bron van kennisoverdracht op het gebied van licht en verlichting zijn. Samen met andere creatieve geesten reiken de ambities ver. Om die reden worden duurzame professionele verlichtingsconcepten en -systemen ontworpen en geproduceert. Origineel, niet-standaard, ontwerpen die het gemiddelde ontstijgen, voor al degenen die iets bijzonders en duurzaams willen.

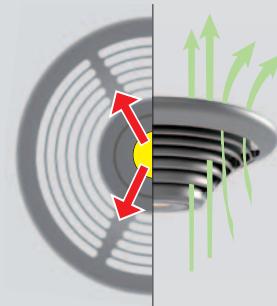

Zo heeft op basis van langjarig onderzoek Egbert Keen een geheel eigenzinnig armaturenprogramma ontworpen dat aan alle eisen voldoet van een goed functionerend led-armatuur. Het resultaat: armaturen voor decoratieve en functionele toepassing, waarvan de levensduur nagenoeg oneindig is.

D

Keen Lichtdesign hat den Anspruch, eine Inspiration auf dem Gebiet von Licht und Beleuchtung zu sein. Zusammen mit anderen kreativen Geistern sind die Ambitionen hoch. Deshalb wurden nachhaltige professionelle Beleuchtungskonzepte und – systeme entworfen. Originell, keine Massenware, Entwürfe, die den Durchschnitt überragen, für alle diejenigen, die etwas Besonderes und Nachhaltiges wollen.

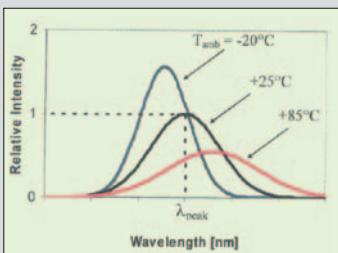

Entsprechend hat Egbert Keen auf der Grundlage langjähriger Forschung ein völlig einzigartiges Leuchtenprogramm entworfen, das allen Anforderungen an eine gut funktionierende LED-Armatur genügt. Das Ergebnis: Armaturen für die dekorative und funktionelle Anwendung, deren Lebensdauer nahezu unendlich ist.

Cool Led Technology

Licht dat niet dooft

Het Cool Led Technology label is een kwaliteitsgarantie voor duurzaam gebruik en komt rechtstreeks voort uit onderzoek naar de toepassing van led-chips in verlichtingsarmaturen. Daaruit ontstond een geheel nieuwe generatie verlichtingsarmaturen met een passief warmteopname en actief afgiftesysteem.

Cool Led Technology – CLT

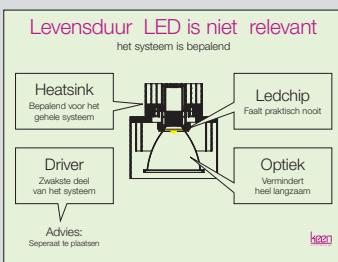

Een ledchip zet ongeveer 70% van zijn energie om in warmte. Deze warmteontwikkeling is in hoge mate bepalend voor levensduur, lichtstroom en de lichtkleur.

Als de temperatuur van de chip toeneemt, heeft dat gevolgen:

- dramatische afname van de levensduur;
- sterke vermindering lichtstroom (L_m);
- instabiele kleurtemperatuur.

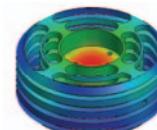

De lichtstroom en lichtkwaliteit afhankelijk van thermisch design

Bij een goed thermisch ontwerp en een kwalitatief goede ledchip is de levensduur van de chip niet relevant. Deze faalt praktisch nooit. De heatsink is bepalend voor het gehele systeem en de drivers vormen het zwakste deel daarvan. Om die reden alsmede vanwege de temperatuur (max. 50° omgevingstemperatuur), is het beter deze separaat van de chipbehuizing te plaatsen. De optiek vermindert langzaam, maar is eenvoudig uitwisselbaar.

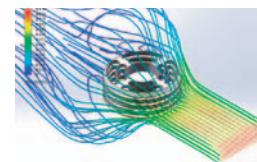

CLT – label

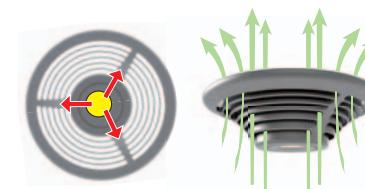

Egbert Keen deed een onderzoek naar de effectiviteit van koellichamen die verlichtingsfabrikanten in veel gevallen toepassen. Zijn conclusie luidt dat die veelal overgenomen zijn uit andere elektronica toepassingen en voor de verlichtingsarmaturen niet effectief genoeg zijn. De meeste koellichamen hebben een redelijke warmteopname maar geen goede afgifte, juist door die manier van toepassen.

Keen ontwikkelde vervolgens een koelsysteem waarbij de prioriteit bij de warmteafgifte ligt, om zo de effectiviteit te verhogen. Hij testte daarbij verschillende koelvormen op warmteopname.

Om de warmteafgifte te optimaliseren, volgde hij de luchtstromen en testte hij ook de turbulentie in een windtunnel.

Daaruit ontstond een ontwerpmodus dat de warmte van de chip direct naar de buitenkant transporteert en opgenomen in de koelvinnen.

Door de opstijgende luchtstromen die langs de vinnen voeren - tot bijna aan de chip - wordt de warmte van het armatuur afgevoerd.

Armaturen en lichtbron zijn als het ware samenge-smolten tot één elektronisch product. Op deze wijze ontstond een geheel nieuwe generatie verlichtings-armaturen, opgebouwd uit modulaire elementen, waarnaar believen technische als creatieve elementen kunnen worden aan toegevoegd. De armatuur zijn dus design-koellichamen, gemaakt uit aluminium. 'Design follows function': niets aan de armaturen is overbodig; alles heeft zijn functie.

Pay for Light

Achtergrond

De natuur zorgt voor het behoud van de aarde. Het is de natuur die al het leven mogelijk maakt. De mens is slechts een gast op deze aarde en niet de gastheer zoals hij zich vaak gedraagt. Om de relatie met de aarde meer in balans te brengen, wordt het steeds noodzakelijker dat we zuiniger omgaan met onze omgeving en grondstoffen. De westerse consumptiemaatschappij produceert bijvoorbeeld elk jaar meer dan 50 miljoen ton elektronisch afval. Dat kan niet doorgaan.

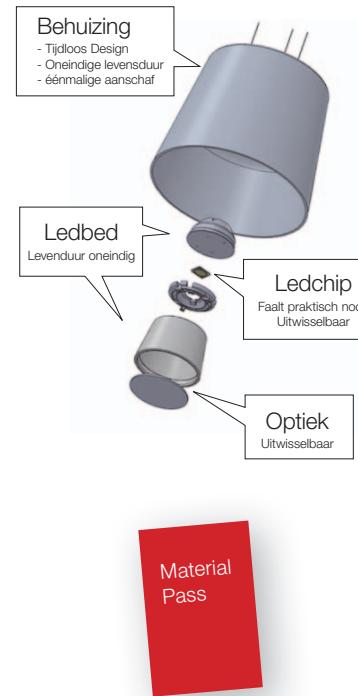

Pay for Light!

Wat betekent het concept Pay for Light? Men koopt het licht, en sluit een gebruiksovereenkomst (voor bepaalde tijd) af voor de armaturen die dat mogelijk moeten maken. De gebruiker betaalt uitsluitend voor het gebruik, inclusief de service. Het is een duurzame oplossing, zonder risico's en met heldere maandelijkse kosten.

Redenen genoeg om te kiezen voor Pay for Light!

- Duurzaam gebruik van grondstoffen;
- Kwaliteitsverlichting met zeer lage energiekosten;
- Facilitaire besparing: geen onderhoudskosten;
- Duidelijke gebruikskosten, geen risico's;
- Investering over langere periode uitgestrekken;
- Door hergebruik op termijn nog lagere kosten;
- Altijd voorzien van de allerlaatste lichttechnieken;
- Materialen zijn inleverbaar tegen een restwaarde.

Circulair gebruik

Aan het eind van een overeenkomst kan Keen Licht Design de armaturen van de nieuwste technieken voorzien en met de gebruiker een nieuwe overeenkomst aangaan. Dat betekent dat na afloop van een overeenkomst, door het hergebruik van materialen, een goedkopere vervolgovereenkomst kan worden afgesloten. De ontwikkeling van de ledchip gaat snel en de verwachting is dat de lichtstroom in de komende jaren nog sterk zal toenemen. Dit levert ook nog eens een geschat energievoordeel op van circa 30% tot wel 50%.

Material pasport

Alle materialen worden, per ruimte, opgenomen in een Material Pasport. Alleen materialen voorzien van een CLT label (Cool Light Technology) kunnen in een overeenkomst en in het Material Pasport worden opgenomen

Diverse typen overeenkomsten

Material Use

- De gebruiker is geen eigenaar van de materialen, maar verwerft het gebruikrecht (voor een overeengekomen periode), inclusief een serviceovereenkomst.
- De gebruiker kan na afloop van de overeenkomst componenten laten uitwisselen tegen de dan geldende, moderne technieken. Daarna sluit men weer een nieuwe overeenkomst.
- Bij het aangaan van een nieuwe overeenkomst met nieuwe materialen, bepaalt Keen Licht Design de restwaarde van de materialen uit de voorgaande overeenkomst. Deze restwaarde wordt vervolgens verrekend in de nieuwe gebruiksovereenkomst.

Koop

- Overeenkomst die de gebruiker eigenaar maakt van de materialen.
- Optioneel: een onderhoudscontract voor bepaalde tijd.
- Bij afloop van de overeenkomst kan de eigenaar de armaturen naar de nieuwste technieken laten renoveren en een nieuwe overeenkomst aangaan.

LEGENDA

UK In the tables you will find the light technical details for all the fixtures. The type number/order number consists of the type of fixture and the photometric code. This number combination also includes the beam angle of the fixture. The data code in the table corresponds to the code in the Data Matrix. In this matrix you will find the various current (mA) which regulate the fixture and the flux (Lm) which ensue. The information in the data matrix under Vf (Forward Voltage) and under W (Wattage), together with the current (Lm) determine the choice of the Driver (see figure 2). The value of the Vf and of the Wattage may not exceed the value of the driver.

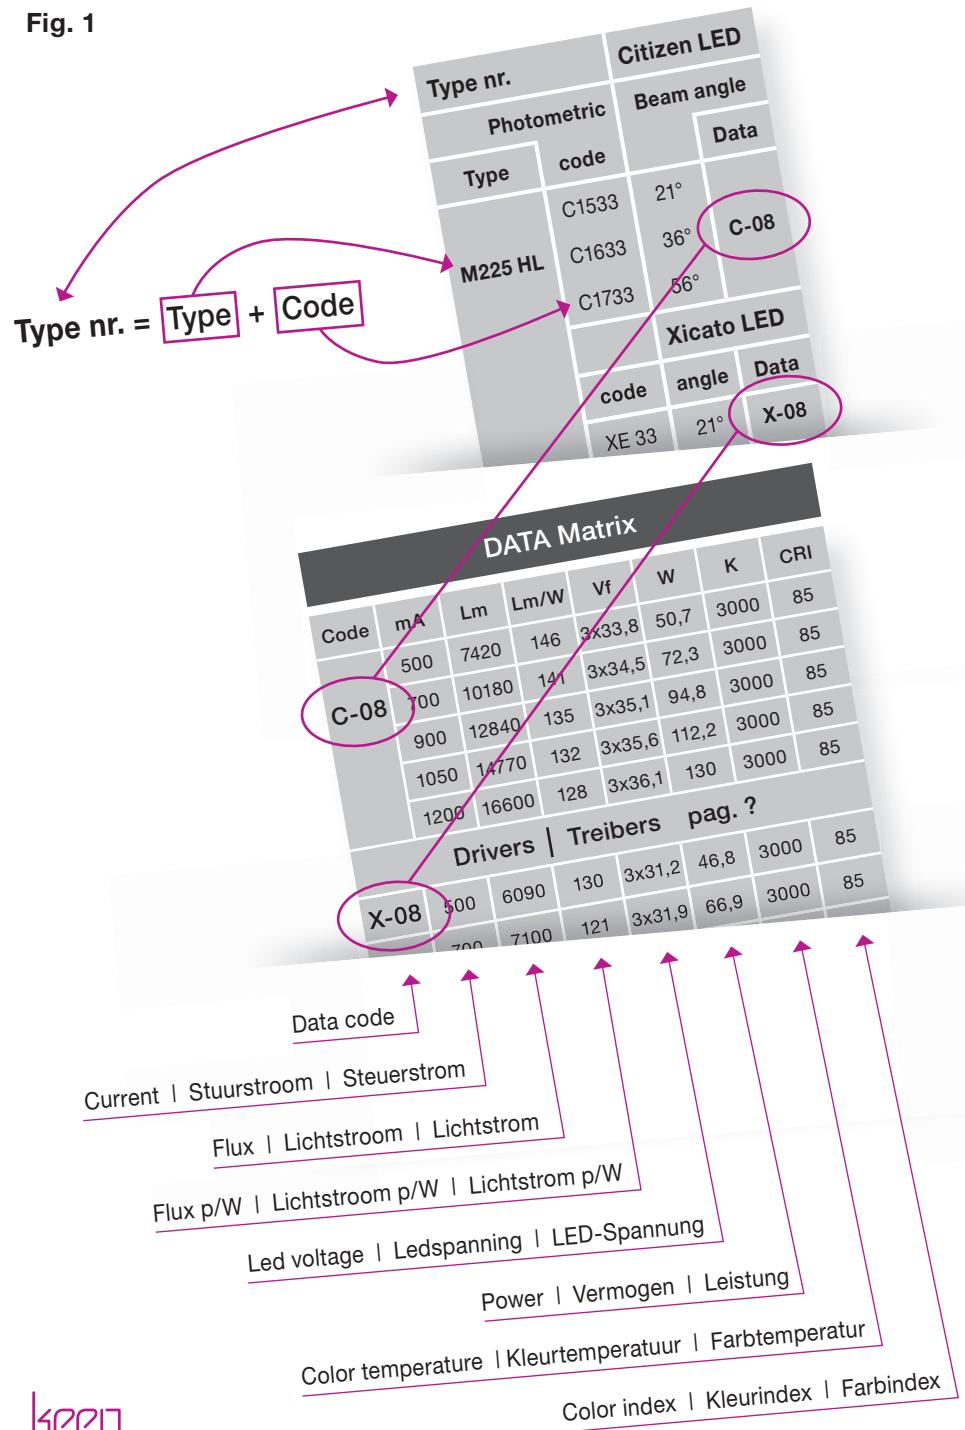

NL Bij alle armaturen vindt u tabellen met de lichttechnische gegevens (zie fig. 1). Het type-nummer/ordernummer bestaat uit het armaturentype en de fotometrische code. Deze nummercombinatie geeft ook de stralingshoek weer van het armatuur (Beam Angle). De datacode in de tabel correspondeert met de code in de Data Matrix. In deze matrix staan de verschillende stuurstromen (mA) waarmee het armatuur is aan te sturen en de lichtstromen (Lm) die daarbij wordt verkregen. De gegevens in de datamatrix onder Vf (Forward Voltage) en onder W (Wattage) zijn, samen met de stuurstroom (Lm), bepalend voor de keuze van de Driver (zie fig. 2). De waarde van de Vf en van het Wattage mogen de waarde van de driver niet overschrijden.

D Bei allen Leuchten finden sich Tabellen mit den lichttechnischen Angaben (s. Abb.1). Die Typennummer/Bestellnummer besteht aus dem Leuchtentyp und dem fotometrischen Code. Diese Zahlenkombination gibt auch den Strahlungswinkel der Leuchte an (Beam Angle). Der Datencode in der Tabelle korrespondiert mit dem Code in der Datenmatrix. In dieser Matrix stehen die verschiedenen Steuerströme (mA), mit denen die Leuchte zu versorgen ist und die Lichtströme (Lm), die dabei erreicht werden. Die Angaben in der Datenmatrix unter Vf (Forward Voltage) und unter W (Wattage) sind, gemeinsam mit dem Steuerstrom (Lm), ausschlaggebend für die Wahl der Treiber (s. Abb.2). Die Werte der Vf und der Wattage dürfen die Werte des Treibers nicht übersteigen.

Infinity & timeless

UK Rectas is the Latin word for straight lines. That is exactly how this series of circular and recyclable LED luminaires was intended: technical decorative, with direct or indirect light. There are 6 versions, all named after famous thinkers and philosophers: Aurelius, Bredero, Cicero, Diderot, Erasmus and Freud. The fixtures are made of aluminium with black or cherry wood details. Thanks to the use of LED heat collectors very high luminous fluxes are reached. Available in different lengths.

NL Rectas is het Latijnse woord voor rechte lijnen. Dat is precies wat deze series circulaire en recyclebare LED armaturen beogen en uitstralen: technisch decoratief, directe of indirect stralend. Er zijn 6 uitvoeringen, allen genoemd naar bekende denkers en filosofen: Aurelius, Bredero, Cicero, Diderot, Erasmus en Freud. De armaturen zijn uitgevoerd in aluminium met zwarte of kersenhouten details. Door het gebruik van LED warmtecollectoren worden zeer hoge lichtstromen bereikt. Leverbaar in verschillende lengtes.

D Rectas ist das lateinische Wort für gerade Linien. Das ist genau das Ziel dieser Serie von kreis- und Recyclable LED leuchten: Technisch dekorativ, direktes oder indirektes Licht. Es gibt 6 Versionen, benannt nach berühmten Denker und Philosophen: Aurelius, Bredero, Cicero, Diderot, Erasmus und Freud. Die Leuchten sind aus Aluminium mit schwarzen oder Kirschholz Details ausgeführt. Durch den Einsatz von LED Wärmekollektoren sind sehr hohe Lichtströme erreicht. In verschiedenen Längen erhältlich.

Dimming of LED drivers

UK There are a number of different dimming systems which all have their own way of wiring. (see schedules).

NL Er zijn verschillende dim sturing systemen met elk hun eigen bedradingssystemen (zie schema's hieronder)

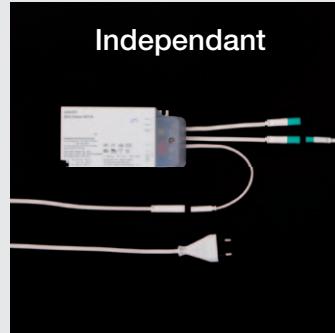

D Es gibt verschiedene Dim Systeme, jede mit eigenen Verdrahtung Weise.

Drivers constant Voltage

Aurelius

Marcus Aurelius (Rome 121-180) was de laatste van de "vijf goede Keizers". Zijn werk, Meditaties, geschreven tussen 170 en 180, wordt nog steeds als een literair monument gezien. Hij beschrijft hoe men te midden van conflicten gemoedsrust kan vinden en behouden, door de natuur als bron van begeleiding en inspiratie te volgen.

Gerbrand Adriaenszn Bredero (1585-1618) Nederlands schilder, filosoof, dichter, rederijker maar vooral schrijver van toneel en lyriek. Zijn belangrijkste werk is het blijspel De Spaanse Brabander uit 1617, het hoogtepunt van de Nederlandse blijspelkunst uit de gouden eeuw.

Bredero

Cicero

Marcus Tullius Cicero (106 v. Chr.-43 v. Chr.) was een Romeins redenaar, politicus, advocaat en filosoof. Zijn leven viel samen met overgang van de Romeinse Republiek naar het keizerrijk. Hij was betrokken bij de meeste politieke gebeurtenissen en zijn geschriften getuigen hiervan.

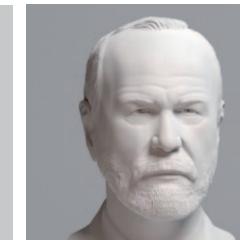

Diderot

Denis Diderot (1713-1784) was een Franse schrijver, filosoof, kunstcriticus en persoonlijkheid in het verlichtingsdenken. Tussen 1750 en 1776 was hij redacteur van de Encyclopedia en schreef circa 6000 van de 7200 artikelen uit dat werk. Hij was voor vrije meningsuiting en voor vrijheid van godsdienst.

Erasmus

Desiderius Erasmus (1467-1536) was een Nederlandse priester, Augustijner kanunnik, theoloog en denker. Hij schreef veel boeken waaronder Adagia en Lof der zotheid waarin hij de spot drijft met de manier waarop de mensen eigenlijk alleen maar aan zichzelf denken.

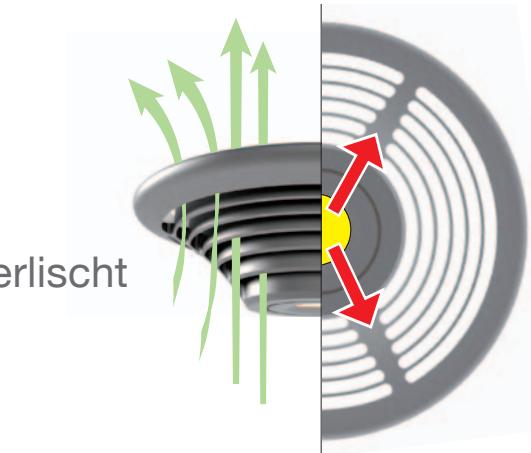

Freud

Sigmund Freud (1856-1939) was een neuroloog uit Oostenrijk-Hongarije. Hij is de grondlegger van de psychoanalyse dat de basis is van de moderne psychotherapie. Zijn ideeën hadden veel invloed op André Breton, de grondlegger van de surrealistische beweging in de kunst. Ook Salvador Dalí gebruikte veel Freudiaanse symboliek in zijn werk.

Methusalem

Light that never dies – Licht dat niet dooft – Licht das nicht erlischt

Methusalem

UK A lighting system fitted with the brand new quality label Cool Led Technology (CLT). The Methusalem lighting systems with this CLT label simply never give up. Methusalem is a system built up out of modular elements. Both technical and decorative elements can be added as required. It can be used anywhere, there are plenty of variations possible. Fixtures go up to 25.000 Lm. All designs are based on the CLT technology.

NL Een verlichtingssysteem voorzien van gloednieue kwaliteitslabel Cool Led Technology (CLT). Methusalem verlichtsystemen voorzien van dit CLT label geven het nooit op. Methusalem is een systeem dat is opgebouwd uit modulaire elementen. Naar believen kunnen zowel technische als decoratieve elementen eraan worden toegevoegd. Overal toepasbaar, variatie genoeg: armaturen tot meer dan 20.000Lm. Alle ontwerpen zijn gebaseerd op CLT technologie.

D Ein Beleuchtungssystem, das mit dem brandneuen Gütesiegel CLT (Cool Led Technology) ausgestattet ist. Methusalem Beleuchtungssysteme mit dem CLT Gütesiegel versagen nie. Methusalem ist ein System, das aus modularen Elementen zusammengestellt ist. Ganz nach Bedarf können sowohl technische als auch dekorative Elemente hinzugefügt werden. Überall kompatibel, beliebige Variationsmöglichkeiten: Leuchten bis mehr als 25.000Lm. Alle Entwürfe basieren auf CLT-Technologie.

Cool Led Technology (CLT)

UK The CLT label guarantees quality for sustainable use and is a direct result of research into the application of LED-chips in lighting fixtures. This led to the development of a whole new generation of fixtures. Fixture and light source are combined together as one electronic product with a passive heat absorption and release system. This guarantees the quality of the light and its lifespan.

NL Het CLT label is een kwaliteitsgarantie voor duurzaam gebruik en komt rechtstreeks voort uit onderzoek naar de toepassing van Led-chips in verlichtingsarmaturen. Daaruit ontstond een geheel nieuwe generatie armaturen. Armaturen en lichtbron zijn als het ware samengesmolten tot één elektronisch product met een passief warmte opname en afgiftesysteem. Hierdoor is de lichtkwaliteit en levensduur gewaarborgd.

D Das CLT-Siegel bietet eine Qualitätsgarantie für langlebigen Gebrauch und kommt unmittelbar aus der Anwendungsforschung für Led-Chips in Beleuchtungskörpern. Daraus hat sich eine völlig neue Generation von Leuchten entwickelt. Leuchten und Lichtquelle sind im wahrsten Sinne des Wortes verschmolzen zu einem elektronischen Produkt mit passivem Wärme-Aufnahme-und-Abgabe-System, das Lichtqualität und Lebensdauer verbürgt.

M222 PL.01.C9833

M224 PL.01.C9533

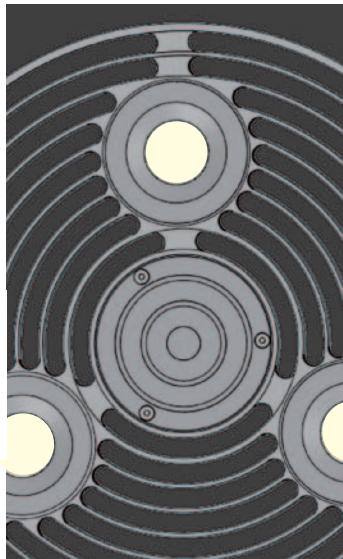

Belus

UK Methusalem fixtures of the Belus series, made of aluminium, have the CLT label that guarantees the luminous flux, light color and lifespan.

NL Methusalem armaturen type Belus uit aluminium, voorzien van het CLT label dat garant staat voor behoud van lichtstroom, lichtkleur en levensduur.

D Methusalem leuchten type Belus aus alu. Design-kühlkörper mit CLT label. Dadurch wird der lichtstrom, Lichtfarbe, und die Lebensdauer garantiert.

Dimming of constant current LED drivers

UK Dimming of constant current drivers. For determining the correct driver you need to know the circuitry or the dimming system. There are a number of different dimming systems which all have their own way of wiring.
(see schedules below).

NL Voor het bepalen van de juiste driver moet het schakel- of dimsysteem bekend zijn. Er zijn verschillende dim sturing systemen met elk hun eigen bedradingwijze.
(zie schema's hieronder)

D Zur Bestimmung des benötigten Treibers muss die Art der Schaltung / Dimmung vom Projekt bekannt sein. Es gibt verschiedene Dim Systemen, jede mit ihrer eigenen Verdrahtung Weise.

Methusalem drivers

Important

UK In order to achieve the required light strength the current (mA) will determine the choice of the driver. The LED voltage (Vf) may not exceed the Vf value of the driver.

This also applies to the capacity (W) of the LED. More information is available in Fig. A on page 60-61

Belangrijk

NL Om de gewenste verlichtingssterkte te bereiken is de stuurstroom (mA) bepalend bij de keuze van de driver.

Daarbij mag de ledspanning (Vf) de Vf waarde van de driver niet overschrijden. Dit geldt ook voor het vermogen (W) van de led. Informatie vindt U in fig. A en op pag. 60-61

Wichtig

D Um die gewünschte Beleuchtungsstärke zu erreichen, ist die Steuerstrom entscheidend bei der Wahl des Treiber.

Die Ledspannung (Vf) darf die Vf-Werte des Treibers nicht überschreiten. Dies gilt auch für die Kapazität (W) der LED. Informationen finden Sie in der Fig. A und auf Seite 60-61.
